

## PARKING AND PLANNING PROJECTS

**Mound Transportation Center - Mound, Minnesota**

Albersman & Armstrong, Ltd. was retained by Walker Parking Consultants to provide architectural design services for a new Transit Center / Parking Facility in the City of Mound, Minnesota. Part of the design challenge was to be sensitive to the Client's desire to link the aesthetics of the new facility with the City's past history of being a lake resort community.

The new facility will use features such as steep sloping roofs with scalloped shingles and flags, brick covered columns, a clock tower as well as ornamental features that blend in with the area's new streetscape scheme. This provides the flavor of once a famous resort that occupied the shores of nearby Lake Minnetonka in the nineteenth century. Other features include transit bus parking with a waiting area for patrons, area for a future light rail platform and space for a weekend farmer's market. In 2008, the project received a merit award from the Minnesota Chapter American Planning Association.
